

TCOM610 DL – Multi Protocol BGP Routing

Department of Electrical and Computer Engineering

George Mason University

Fall, 2021

Course Description

This is one of the main courses on IP routing protocol series designed to teach the current state of the art for Internet routing. The course covers Internet evolution, RFC specifications for BGP routing and its extensions, vendor BGP implementation and configuration syntax, and routing policy and implementation in enterprises and Internet service providers networks (ISP). The topics includes BGP4 standards, BGP protocol states, BGP routing attributes, BGP decision algorithm, route-reflectors and AS confederations (iBGP), BGP routing policy, traffic load-balancing and routing redundancy, BGP dampening, MP-BGP, L2-/L3-VPN with MPLS and BGP convergence.

Prerequisites

Students must finish at least TCOM509, TCOM515 equivalence before taking this class. TCP/IP protocols, IP routing basics, and IP addresses knowledge are assumed. Students are also recommended to take IGP routing course (TCOM609) before or after taking this BGP course.

Location & Time

Online – Blackboard Collaborate, Thursday, 4:30PM-7:10PM,
August 23 – December 9, 2021

Instructor

Tawfiq Khan tkhan5@gmu.edu

Office Hour: By email, or by appointment only

Phone: 571-425-1657 (Send text or call)

Textbooks

Internet Routing Architectures 2nd Edition, Sam Halabi, Danny McPherson, 2nd Edition, ISBN 1-57870-233-X, 2000, Cisco Press

Grading and Projects

There will be one mid-term exam and one final exam. All exams are closed book. There will be one individual project. Students are required to submit the project to the instructor prior to the due date electronically. Late projects will not be accepted unless the prior permission has been granted. Your final course graded will be calculated as follows:

Mid-term	25%
Final Exam	30%
Project	35%
HW	10%

Schedule

Week 1 8/26 Overview of course, grading policy, Exams, Homework, and Course Project, (AddressingIPRouting.ppt

Week 2 9/2 Continue BGP Basics Part I: BGP protocol specification, (BGPBasics_partI.ppt; Chapters 4~5)

Week 3 9/9 BGP Basics Part II: BGP attributes RFC4271 and configuration (BGPBasics_partII.ppt; Chapters 4~5)

Week 4 9/16 BGP Decision process and BGP Policy (BGPPolicy.ppt Chapter 6)

Week 5 9/23 BGP Redundancy and Load balancing, BGP Case Study (AdvancedBGPPolicy.ppt; Chapter 7)

Week 6 9/30 BGP Scaling: IBGP, Route-reflectors and AS confederations (IBGPPolicy.ppt; Chapters 8~9); Mid-Term Exam study guide and formal introduction of BGP Project

Week 7 10/7 **Mid-term Exam**

Week 8 10/14 Mid Term review, and project discussion

Week 9 10/21 ISP Services design and Peering (ISPServiceNTroubleshooting.ppt; Some topics in chapter Chapter 2)

Week 10 10/28 BGP extension: capability, refresh, BGP security (BGPSecurity.ppt; BGPExtensions.ppt; Not in book)

Week 11 11/4 BGP convergence, route dampening, performance tuning (BGPConvergence.ppt; Some topics in chapter 10)

Week 12 11/11 MPLS and L2/L3 VPN Architecture (MP-BGP.ppt; Not in book)

Week 13 11/18 Project discussion

11/25 * No classes: Thanksgiving Holiday *****

Week 14 12/2 Final Exam study guide, Project discussion *****Project Due*****

Week 15 12/9 **Final Exam**

NOTE: Chapters references are for the Sam Halabi book: Internet Routing Architectures)
